DETAILED ACTION***Claim Rejections - 35 USC § 102***

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 14 is rejected under 35 U.S.C. 102(b) as being anticipated by Trimmel (PN 4,292,606).

Column 2 discloses supplying three values of currents for driving and modulating the laser diode a bias current (I_0), a pilot signal current (I_s) and a modulation current (I_{mod}) for generating the pulses, as illustrated in figures 1 and 2.

U.S. Patent Sep. 29, 1981 Sheet 1 of 3 4,292,606

FIG 1

U.S. Patent Sep. 29, 1981 Sheet 2 of 3 4,292,606

FIG 2

Allowable Subject Matter

Claims 1-13 are allowed.

The following is an examiner's statement of reasons for allowance:

After reviewing applicant's arguments and conducting an updated search examiner finds that none of the cited prior arts alone or in combination discloses the claimed semiconductor laser driver circuit having the claimed limitations of independent claims 1 and 13.

Regarding claims 1-12.

None of the cited prior arts disclosed the claimed structural combination of independent claim 1 having a first bias current supply means at a time of non-output data for generating a current for driving the semiconductor laser, a signal processing means for generating a pulse current control signal in which the data signal is delayed and generating a second bias current control signal, a pulse current supply means for generating a pulse current in accordance with the pulse current control signal of the

Art Unit: 2828

signal processing means and a second bias current supply means for generating a second bias current for driving the semiconductor laser in accordance with the second bias current control signal of the signal processing means, where the recited means having the structural arrangement as described within the specification.

Regarding claim 13.

None of the cited prior arts disclosed the claimed method of independent claim 13 of generating a first bias current at a time of non-output data for driving the semiconductor laser, generating a pulse current control signal in which the data signal is delayed and generating a second bias current control signal, generating a pulse current in accordance with the pulse current control signal and generating a second bias current for driving the semiconductor laser in accordance with the second bias current control signal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 2828

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
